

GP Connect Update Record for Hypertension Case-Finding Clinic Checks and Contraception templates

Important information: GP Connect Update Record for Hypertension Case-Finding Clinic Checks and Contraception templates

We are planning to go live with GP Connect Update Record for Hypertension Case-Finding Clinic Checks and Contraception templates from **00:00 on Friday 28th June 2024**.

From this date, structured information of service provisions recorded on these templates will be flowed to the patient's registered GP via Update Record.

Where urgent action is needed by the GP practice, a referral email will still be sent to the GP if the GP practice has verified their email. However, pharmacy teams should continue to follow guidance in the Service Specification and contact the GP practice via alternative means, such as telephone, where clinically required to do so.

If the GP email address is not verified, and a referral email cannot be sent, the referral will need to be sent manually. The notification will be shown on the yellow banner at the top of the Services page, in the same way as currently displayed.

There are no significant changes to the service templates and users can continue to offer the service in the existing format. No further action is required from users other than an understanding that messages will now flow via Update Record.
